

# ELA-Certification for Logistics Professionals

---

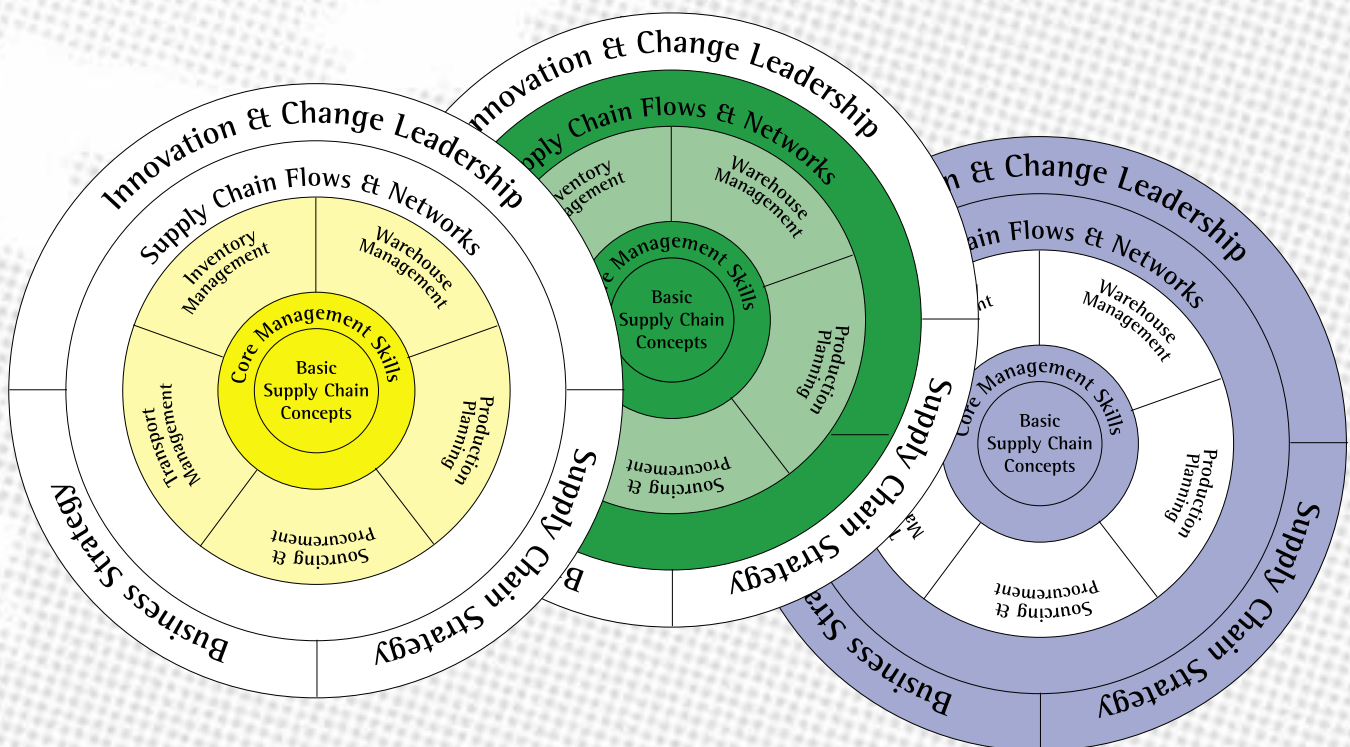

# European Certification for Logistics Professionals

The ELA certificate is available to those who are able to meet the professional standards set by the European Logistics Association (ELA). There are three levels of competence. Logisticians who obtain the ELA certificate are entitled to use the designatory letters after their name:

EJLog – European Junior Logistician on the Supervisory/Operational Management level

ESLog – European Senior Logistician on the Senior Management level

EMLog – European Master Logistician on the Strategic Management level

## The Competence system

The ELA Standards of Logistics Competence reflect the expectations of workplace performance and they have been developed with and agreed by industry. The Standards are outcome-based and form the basis of assessment. Assessment is independent of any learning programmes. The European Certification Board of Logistics does not prescribe in any way the methods or courses by which candidates may attain or develop the knowledge and skills, however acknowledged programmes can contribute to the development of knowledge, skills and competencies required for ELA-Certification. The ability of candidates to meet the required Standards will be assessed by National Certification Boards established in each member country. The national representatives are found on the back.

If interested, please contact us for further information. If your own country is not represented, please contact [ela@elalog.org](mailto:ela@elalog.org) or the nearest country representative.

## The ELA- Certificate

*As a logistician, would you like to be able to demonstrate that you can perform to a common European standard of competence in your job?*

European certification will be particularly useful for all logisticians who are already working within a European or worldwide supply-chain, or for those who plan to work outside the country. It will prove to employers that individuals can perform to a common European standard of competence in their jobs.

As an Interim Manager it is important that my clients recognise that I have the knowledge and understanding of the Supply Chain. Not only within the UK but, as we now have daily business links with Europe, it is a common standard recognised there too.

David Zelonka

*You, as an employer, interested in assuring that you hire a qualified person? Or are you interested in developing your current personnel by bringing them to world-class competence level?*

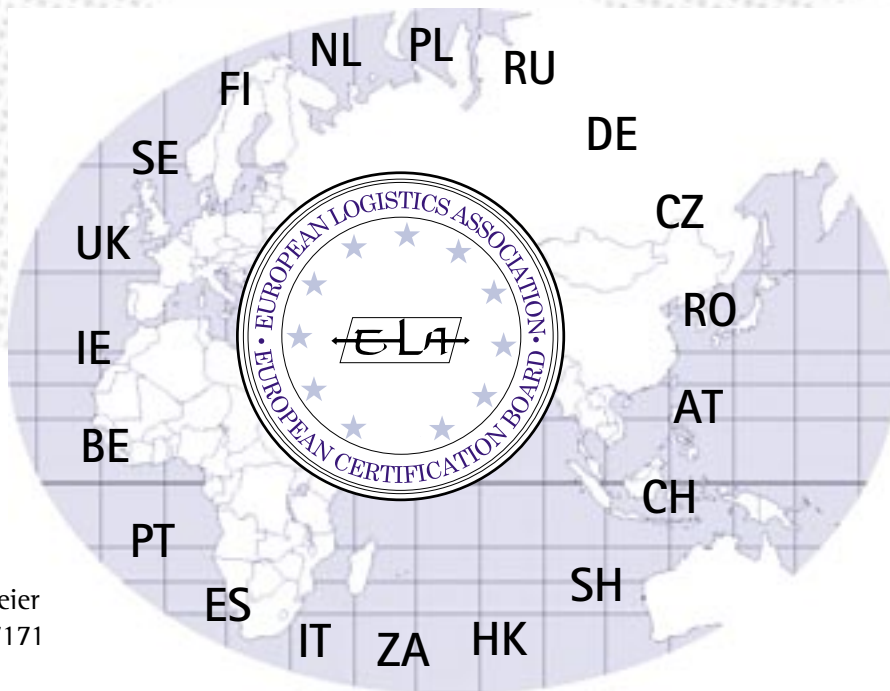

European certification will be beneficial for employers, who can rely on the competence level of the person applying for a position or for marking the staff.

With global trade, it is important to have an international recognition of the acquired knowledge and understanding within the Logistics field. The ELA Certification informs European companies that the bearer of an ELA Certificate has acquired a standard level of knowledge and understanding in the fields of Logistics and Supply Chain Management.

Chris Slijkhuis - Director Sourcing Europe MBA Polymers
